The Visigraph 100% Satisfaction Guarantee

We pay **careful attention** to every detail on every order we receive, and our **100% Satisfaction Guarantee** is just what it says...you'll love our custom flags and banners or we'll re-do them. It doesn't happen often, but hey, we're human too! Rest assured, though, that if it does, we'll fix'em free of charge and with **no hassle**.

Calculating the Size of your Sign, Banner, or Decal

Length x Width = Number of Square Inches. For example, if you have a decal that is 3" x 5" simply multiply **3 x 5 = 15 square inches**.

More Information on Dye-sublimation Printing

Dye-sublimated printing is a **heat-transfer process**, whereby we print a banner graphic in reverse on a **special transfer paper** and heat-transferred while applying **high pressure** to polyester fabrics. After the paper is printed, the ink/paper is **heated to 400+ degrees** and using pressure on the paper/ink/fabric, the ink turns into a gas and "sublimates" itself into the fabric - hence the term dye-sublimation. Compared to direct solvent print to fabric, the dye-sublimation process provides **more vibrant colors** and a photo-clear definition. Another advantage of fabric printing companies using the dye-sublimation printing process is that these fabric banners are **machine washable** on a gentle cycle with mild detergent. You can't

do this with solvent-printed fabrics.
